

About Dan Prinsloo

Mr Dan Prinsloo is a Cosmetic and Reconstructive Plastic Surgeon serving North Staffordshire and Shropshire.

He first qualified in 1987 as a Medical Doctor at the University of Pretoria, South Africa, where he graduated as a Bachelor of Medicine/Bachelor of Surgery (MBChB). He was always interested in plastic and reconstructive surgery and had extensive exposure to surgical procedures even as a junior doctor. In 1989, he joined the extensive training programme in Plastic and Reconstructive Surgery at the University of Pretoria.

He qualified as a Plastic Surgeon in 1995 after completing his Master's degree in Plastic and Reconstructive Surgery (MMed Plast Surg). In the same year, he also achieved the distinction of becoming a fellow of the Royal College of Surgeons of South Africa (FCS Plast (SA)).

Further training and experience

Mr Prinsloo was appointed as Consultant Plastic Surgeon within the NHS in South Africa (Pretoria) in 1996. He decided to gain further specialised training and experience by undertaking fellowships in some of the best plastic surgery units in the world. He received further extensive training in Taipei (Taiwan), Tokyo (Japan) and Glasgow (Scotland). He then returned to South Africa to continue his work as a consultant within the NHS as well as working as a private Cosmetic Surgeon. He moved to the UK in 1998 and in 1999 was appointed as Consultant Plastic Surgeon within the NHS in North Staffordshire (Newcastle-under-Lyme) and Shropshire (Shrewsbury).

Expertise and special interests

Mr Prinsloo is an experienced breast surgeon and performs mainly reconstructive breast surgery within the NHS. He also provides a service in specialised head and neck skin cancer surgery, limb reconstruction and general plastic surgery. Mr. Prinsloo is a highly experienced Cosmetic Surgeon providing the full range of cosmetic procedures.

Breast Enlargement

Breast Enlargement

(Breast Augmentation)

Description

Insertion of silicone gel implant to enlarge breast size, enhance shape and/or improve asymmetry.

Who are candidates?

- Women unhappy with their breast size and shape
- Those wishing to regain breast size or shape after childbirth
- Women with breast asymmetry

How is it done?

Breast implants are available in a variety of types, shapes and sizes. Mr. Prinsloo will advise you on which shape of implant and method of inserting is right for you. Short incision either in the crease under breast, around areola or in armpit. Implants may be positioned either between the glandular tissue of the breast and the pectoral muscle (sub-glandular) or behind the muscle (sub-muscular).

Length of surgery

From 1½ to 2 hours

Hospital stay

Two night stay is recommended

Anaesthesia

General anaesthetic

Time to heal

- Driving is possible after first few days
- Return to work in one week
- Breasts will be tender and bruised, with swelling lasting several weeks
- Support bra to be worn for 4 weeks
- Resume normal activity in 4-6 weeks

Risks

Bleeding, infection, visible scars, wrinkling or folding of implant (more so in skinny patients), loss of sensation, asymmetry between breasts, contraction of scar capsule around implant (5-10%) and complications related to anaesthesia.

Duration of results

Long-lasting, though gravity and age may eventually alter breast shape and size.

Pro's

- Improved breast shape and size
- The silicone gel implants used carry a lifetime guarantee from the manufacturer against implant failure and capsular contracture (does not include cost of surgery)
- Will still be able to breastfeed

Con's

- Scarring underneath the breast
- Implants may make it more difficult to read mammograms
- Breast implants alone cannot lift very saggy breasts
- Breast uplift may be required

Answers to myths

- Implants will not explode when flying
- Implants will not leak into body
- Implants will not melt in heat
- Implants will not move to a different part of body
- Implants do not increase risk of breast cancer
