

About Dan Prinsloo

Mr Dan Prinsloo is a Cosmetic and Reconstructive Plastic Surgeon serving North Staffordshire and Shropshire.

He first qualified in 1987 as a Medical Doctor at the University of Pretoria, South Africa, where he graduated as a Bachelor of Medicine/Bachelor of Surgery (MBChB). He was always interested in plastic and reconstructive surgery and had extensive exposure to surgical procedures even as a junior doctor. In 1989, he joined the extensive training programme in plastic and reconstructive surgery at the University of Pretoria.

He qualified as a Plastic Surgeon in 1995 after completing his Master's degree in Plastic and Reconstructive Surgery (MMed Plast Surg). In the same year, he also achieved the distinction of becoming a fellow of the Royal College of Surgeons of South Africa (FCS Plast (SA)).

Further training and experience

Mr Prinsloo was appointed as Consultant Plastic Surgeon within the NHS in South Africa (Pretoria) in 1996. He decided to gain further specialised training and experience by undertaking fellowships in some of the best plastic surgery units in the world. He received further extensive training in Taipei (Taiwan), Tokyo (Japan) and Glasgow (Scotland). He then returned to South Africa to continue his work as a consultant within the NHS as well as working as a private Cosmetic Surgeon. He moved to the UK in 1998 and in 1999 was appointed as Consultant Plastic Surgeon within the NHS in North Staffordshire (Newcastle-under-Lyme) and Shropshire (Shrewsbury).

Expertise and special interests

Mr Prinsloo is an experienced breast surgeon and performs mainly reconstructive breast surgery within the NHS. He also provides a service in specialised head and neck skin cancer surgery, limb reconstruction and general plastic surgery.

Mr. Dan Prinsloo

MBChB, MMed(Plast)FCS(Plast)

Eyelid Reduction

(Blepharoplasty – upper/lower)

Eyelid Reduction

(Blepharoplasty – upper/lower)

Description

Eyebag removal or blepharoplasty refreshes the eyes by reducing puffy bags and excess folds of skin, creating a more youthful appearance.

Who are candidates?

- People with development of loose folds of skin on the upper eyelids feeling heavy and interfering with their normal field of vision
- People with excess skin folds on the lower eyelids creating deepening creases
- People with prominent eyebags. The muscles under the skin of the eyelids will slacken, allowing the fat to bulge forward, giving the appearance of bagginess

How is it done?

Incisions will be made into the natural creases around your eyelids to remove the excess skin and/or fat. The skin is pulled tighter to give a fresher and more youthful appearance.

Length of surgery

Upper eyelid surgery: 1 hour

Lower eyelid surgery: 1 hour

Combined upper and lower eyelid surgery: 1½ - 2 hours

Hospital stay

Overnight stay

Anaesthesia

General anaesthetic

Time to heal

- Tightness and discomfort for 1-2 weeks
- Difficulty to fully close the eyes during first 1-2 weeks
- Swelling and bruising may persist for 2-3 weeks
- Eyes will be watery and feel gritty for 2-3 weeks
- Back to work in 2-3 weeks

Risks

Risks are rare but may include:

- Blurred vision, increased tear production, dry, gritty eyes and difficulty closing the eyelids
- Bleeding, infection, asymmetry of the eyes and risks associated with general anaesthetic (DVT, PE and chest infection)
- Contact lens wearers may have to wear glasses after surgery for 4-6 weeks

Duration of results

Between 10-15 years, maybe affected by lifestyle factors and heredity.

Pro's

- Youthful appearance with minimal scarring
- Makeup can be used after the first week

Con's

- Cannot remove dark circles under the eyes
- Doesn't lift sagging eyebrows
- Doesn't remove crows feet

Answers to myths

- There is no age restriction to eyelid surgery
- Bagginess of eyelids may be hereditary
